

Aquamoves Outdoor Pools Shepparton

The redevelopment of the Aquamoves outdoor area is an exciting milestone project for Shepparton. The design was developed in collaboration with Council, the swimming pool engineer and a range of stakeholders. It seeks to complement the existing building which has been very successful.

Concerns about water loss and sustainability issues drove the need to remove the large, well loved outdoor pool area. This will be replaced by a splash deck, leisure pool and eventually, a social pool.

Providing equitable access for all abilities was the foundation of this outdoor design. Our role encompassed the overall site design from option development to preferred concept. Landscape documentation then included; site setout, levels and drainage. Design and documentation elements included ramps, stairs, the concrete jetty, terraces, shade structures, paths, play features and a sand beach.

On site stormwater will be detained in swales and raingardens, allowing infiltration into the water table below. Planting will draw on a foundation of plants indigenous to the Goulburn Valley region with some feature species drawn from further afield to create the cooling feel of an Australian gorge.
